

## **Two Postdoctoral Positions in Translational Genomics and Plant Bioengineering at North Carolina State University**

The Dr. Wusheng Liu's laboratory in the Department of Horticultural Science, North Carolina State University is seeking two postdoctoral research associates to conduct translational genomics research in ornamental crops (hydrangea and tripidium/miscanthus) and tomato for agronomic trait improvement using plant transformation and gene editing. The candidates are expected to be highly motivated, working hard, and able to work collaboratively in a team. Strong plant molecular biology background and oral and written communication skills are preferred. The positions are currently available with financial support for 3 years, contingent upon satisfactory performance.

Interested applicants please send a CV, a brief description of interests and career goal, and names of three references to [wliu25@ncsu.edu](mailto:wliu25@ncsu.edu)
