1-2 postdoctoral positions at University of Texas at Austin

1-2 postdoctoral positions are available in the laboratory of Hong Qiao in the Department of Molecular Biosciences at University of Texas at Austin (https://sites.cns.utexas.edu/qiaolab). The Qiao lab utilizes a combination of molecular, genetic, biochemical, proteomic and genomic approaches to understand the molecular mechanisms histone modifications and transcriptional regulation in ethylene signaling and stress response.

Highly motivated individuals with strong background in plant genetics, biochemistry and computational biology with a record of scientific productivity are encouraged to apply. Candidates with their PhD degrees and strong motivation within two years and one first-authored publication from their PhD work are required. We have a very friendly lab environment, the individuals with independent thinking and working ability, willing to collaborate with other members are highly desired.

Please send a CV, brief statement of research accomplishments and future research goals, and names and contact information for 3 academic references to Hong Qiao (hqiao@austin.utexas.edu<mailto:hqiao@austin.utexas.edu>).
