A Postdoctoral Researcher Position in Plant Vascular Development

Ji-Young Lee Lab is looking for a highly motivated postdoctoral researcher who will perform the research on identifying novel regulatory programs that govern vascular development in Arabidopsis. The Lee lab research aims to comprehensively understand transcriptional regulation and long or short cell-cell signaling processes that drive vascular stem cell division, cell type specification, and vascular tissue patterning as well as their dynamics in response to biotic stresses.

To address any of these, the postdoctoral researcher should have strong knowledge and skills in basic plant developmental genetics/genomics, with good communication skills and scientific publications.

To apply, send a brief statement of research interest and a CV with the names of three references to Ji-Young Lee (jl924@snu.ac.kr). The application will be reviewed upon receipt and the position will open until it is filled.

More details about Ji-Young Lee Lab and Seoul National University can be found at http://biosci.snu.ac.kr/jiyounglee and http://en.snu.ac.kr.
