Postdoctoral positions – University of Nebraska, Lincoln-Plant non-coding RNAs

Full Description:
Several postdoctoral positions are available in the Yu Lab at University of Nebraska, Lincoln (https://www.unl.edu/psi/). The researchers will study the molecular mechanisms regulating the biogenesis and activity of non-coding RNAs including but not limited to siRNAs and miRNAs in Arabidopsis thaliana and other plant species. The Yu lab uses a combination of molecular biology, genetics, cell biology, computational biology, genomics and biochemistry to address relevant questions. Related publications please refer to:

Applicants should be highly motivated and have a Ph.D. in plant biology with strong background in molecular biology, functional genomics, biochemistry, genetics or cell biology, and demonstrated excellence in research. The positions will start from August 2018, but the start date is negotiable.

How to Apply
To apply, please submit 1) CV, 2) contact information of three references, and 3) a letter summarizing research interests and relevant experiences, to Bin Yu (byu3@unl.edu). Review will begin immediately and continue until suitable candidates are identified.

For more information, please contact Bin Yu at byu3@unl.edu
