Post-doctoral position in plant developmental biology

We are seeking a motivated post-doctoral candidate to join our team studying plant growth and organogenesis. The position is available for 2 years (with the possibility to extend with additional funding) in the group of Dr. Daniel Kierzkowski. The lab uses a combination of genetics, quantitative 4D live-imaging and biomechanics to uncover how cells and tissues interact to produce organ shapes. For more information about the research please refer to: https://kierzkowski-lab.com/

We are interested in highly motivated candidates with knowledge in developmental biology. Experience in confocal imaging and molecular biology techniques are strong assets. The candidate must hold a doctoral degree. The applicant should have good interpersonal skills and be able to work in a collaborative and interdisciplinary environment. Diversity is considered a strength within the lab and all qualified applicants will receive equal consideration for this position.

The Kierzkowski lab is a part of the Plant Science Research Institute at the University of Montreal, Canada. The Institute is equipped with all core facilities necessary for this project including confocal microscopy and an image analysis platform, molecular labs, and a plant cultivation facility. The bilingual city of Montreal is a vibrant university center and cultural capital of Quebec.

Interested applicants should send a CV, a motivation letter (one page maximum - clearly specifying your scientific interest), as well as names and contact of 3 referees to daniel.kierzkowski@umontreal.ca

Deadline for applications: May 10th, 2019.

For more information please contact daniel.kierzkowski@umontreal.ca
