Postdoctoral Scientist position to investigate virus-based gene editing strategies at Iowa State University

A postdoctoral scientist is available in the laboratory of Steve Whitham in the Department of Plant Pathology and Microbiology at Iowa State University (https://www.plantpath.iastate.edu/whithamlab/). This position is recently funded by USDA NIFA to develop virus-based gene editing approaches in sorghum and switchgrass. This is a collaborative project between the Whitham lab and the labs of Maria Salas-Fernandez (Agronomy) and Shui-zhang Fei (Horticulture). We are seeking a highly motivated individual with a strong background in plant molecular biology, molecular plant pathology, or molecular genetics to lead this project. The successful applicant will also have excellent team work and communication skills.

To apply, use the following link to visit the job posting: https://isu.wd1.myworkdayjobs.com/IowaStateJobs/job/Ames-IA/Postdoctoral-Scientist_R2911-1

Questions about the position can be directed to Steve Whitham (swhitham@iastate.edu).
