TEACHING POSTDOCTORAL SCHOLAR POSITION AVAILABLE

A Teaching Postdoctoral Fellow position is available in the area of plant biochemistry at Virginia Tech. Applicants should be interested in developing skills needed for a teaching career, and pursuing research on plant signaling pathways. The teaching program will focus on teaching a non-majors biochemistry course. The research will focus on the enzymes involved in synthesis of inositol phosphate signaling molecules in plant response pathways. Opportunity for interdisciplinary work with engineers on computational approaches to kinetic modeling will be available. The position is initially available for one year, with renewal based on satisfactory progress. Successful candidates will have a background in plant biochemistry and/or molecular biology, a peer-reviewed publication record, strong interpersonal communication skills, and interest in developing a teaching career. Interested candidates should send a cover letter detailing research and teaching experience, along with a CV including the names of three references to Glenda Gillaspy (gillaspy@vt.edu).
