A postdoctoral position is available effective immediately in the lab of Dr. Doris Wagner at the University of Pennsylvania. We study the switch to flower formation and response to exogenous cues with a focus on transcriptional and epigenetic regulation of the changes in cell identity and function. More details about our lab’s work can be found at http://www.bio.upenn.edu/people/doris-wagner or https://sites.sas.upenn.edu/?q=wagner-lab/.

The successful candidate should have completed her/his PhD recently and have a strong publication record. Prior knowledge in several of the following areas is a plus: ChIP (transcription factor or chromatin regulator), transcriptome analyses, epigenetics, genetics, developmental biology, protein purification.

The University of Pennsylvania Biology Department has very active Plant Biology research teams and excellent research facilities. Salary will be commensurate with qualifications and experience. The position will be initially available for one year, with renewal based on performance and funding availability.

Those interested should submit a cover letter (1-2 pages) outlining their research interest and career goals, a current curriculum vitae, and name and contact information for three referees to wagnerdo@sas.upenn.edu
