Post-doctoral position in plant epigenetics at Center for Plant Aging Research at IBS

1-2 postdoctoral positions are immediately available in Center for Plant Aging Research at IBS in which we are trying to dissect epigenetic control of plant senescence and development.

The main focus of the project is to understand the molecular basis of epigenetic mechanisms through miRNAs and histone modification of plant development, senescence and environmental modulation. The project will be conducted in a combination of genetics, genomics and biochemical approaches.

Candidates with extensive experience in molecular biology, genetics, and/or biochemistry are encouraged to apply. If you are interested in this position, please send a letter, CV, brief statement of research interests and the names of three references with email addresses to:

yunju77@gmail.com or yjkim77@ibs.re.kr
