Postdoctoral Researcher in Plant Molecular Biology & Physiology
Korea research Institute of Bioscience & Biotechnology, Daejeon, South Korea
*Application deadline: May 16, 2017

Position: Korean Government Postdoctoral Fellowship for maximum 5 years

Responsibilities: To contribute to projects ‘Identification of mobile lipid signals in systemic acquired resistance of plants’ and ‘Identification of rubber polymerase in rubber-producing plants, both of which are scientifically very significant. The researcher will participate in the projects of long-pursuing breakthrough scientific findings and their commercialization projects’

Requirements: Suitable candidates should be less than 5 years after Ph.D. degree and be well trained in basic techniques of plant molecular biology and physiology. Korean government selects the final recipients of the fellowship primarily based on publication record. Korean postdoc who got Ph.D. oversea and currently working oversea may also apply. Non-Korean is OK any case either oversea or in Korea.

Annual Salary: US$50,000 (in addition, airfare will be provided and dormitory is available at $100/month)
