JOB VACANCY

POSTDOCTORAL POSITION IN LIGHT CONTROL OF PLANT DEVELOPMENT
Vacancy Reference: 040110
Closing date: 6th July 2017

Halliday Lab
http://hallidaylab.bio.ed.ac.uk/

We are seeking an enthusiastic postdoctoral researcher to work on a BBSRC-funded project that seeks to understand how light signalling is coupled to growth and development in the model plant Arabidopsis. This exciting project builds directly on novel findings that link the light activated phytochrome sensors to molecular regulators of leaf development.

The successful candidate will join a collaborative project between the University of Edinburgh, UK and the University of Texas, Austin, USA. This post will be based in Professor Karen Halliday’s lab in the Institute of Molecular Plant Sciences at Edinburgh.
