Postdoc position in Plant hormones transport

Tel Aviv University, Israel

Postdoc position, funded by the ERC, is available in the Shani lab, Department of Plant Molecular Biology Tel Aviv University, Israel. Research in the lab focuses on uncovering the regulatory roles of plant hormones transport mechanisms. We aim to identify and characterize the molecular components regulating plant hormones movement and specific localization.

We are looking for highly motivated young plant biologist researcher with a strong interest in interdisciplinary projects. The position provides the opportunity for considerable innovation research at the interface of plant hormone transport, chemical probes, molecular development, plant genetics, genetic screens, next generation sequencing and molecular imaging.

Good knowledge and practical expertise of current cell and molecular biology techniques as well as hands-on experience with plant developmental genetics are highly desired.

Interested candidates please send CV, academic record and indication of two referees via E-mail to eilonsh@post.tau.ac.il
