Post-doctoral position in Plant Epigenetics

A postdoctoral fellow position is available in the Plants for Human Health Institute, North Carolina State University, at the North Carolina Research Campus to participate in the ongoing research projects focusing on understanding the epigenetic mechanisms regulating plant gene imprinting and reproduction.

This position requires expertise in genome scale data generation e.g., BS-seq, RNA-Seq, ChIP-Seq, and will include bioinformatics analysis. Candidate should have a Ph.D in plant biology, molecular genetics, developmental biology, or related fields with solid experimental skills. The successful candidate must be able to independently design and conduct experiments, and be willing to work collaboratively with other members of the laboratory.

This position is available immediately. Please submit application through https://jobs.ncsu.edu/postings/88116. For additional information, please contact Dr. Tzung-Fu Hsieh (thsieh3@ncsu.edu)
