A postdoctoral position is available for a NIH-funded project in the laboratory of Dr. Xuehua Zhong at University of Wisconsin-Madison (http://zhonglab.genetics.wisc.edu). We utilize a combination of molecular, genetic, genomic, proteomic, and biochemical approaches to understand the molecular mechanisms and biological roles of epigenetic modifications in plants. Highly motivated individuals with strong background in plant genetics, biochemistry and computational biology and a record of scientific productivity are encouraged to apply. Candidates with their PhD degrees within two years and at least one first-authored publication from their PhD work are required. Excellent oral and written communication skills and the ability to work well in a collaborative research environment are essential. Previous experience of genomic analyses (RNA-seq, ChIP-seq, and BS-seq) will be highly advantageous.

Please send a CV, brief statement of research accomplishments and future research goals, and names and contact information for 3 academic references to Xuehua Zhong (xuehua.zhong@wisc.edu).

Xuehua Zhong, PhD
Epigenetics Theme, Wisconsin Institute for Discovery
