**Postdoctoral Opportunity:** A postdoctoral position is available to explore the application of gene-drive systems to plants as part of a collaborative effort with the labs of Profs. Martin Yanofsky, Mark Estelle, Valentino Gantz and Ethan Bier at the University of California San Diego. Studies will employ state-of-the-art “active genetic” tools based on CRISPR gene-drive systems that the Bier lab has developed (*The Dawn of Active Genetics. 2016. Gantz VM, Bier E. Bioessays, 38:50-63*) with the goal of generalizing these technologies to plants. Familiarity with CRISPR technology and *Arabidopsis* genetics is advantageous but not essential. Applicants should send: a cover letter briefly summarizing their background and research goals, a CV with contact information, and the names and contact information of three references to Martin Yanofsky myanofsky@ucsd.edu.

UC San Diego is an equal opportunity/affirmative action employer with a strong institutional commitment to the achievement of diversity among its faculty and staff. All positions are contingent on available funding.
