A Postdoctoral Researcher Position at the Hebrew University

The Efroni lab (http://idanef.wixsite.com/efronilab) is looking for a postdoctoral researcher to study regeneration and organ formation in plants.

The project will utilize single-cell RNA-Seq, microscopy and genetics to uncover the cellular transitions occurring during early stages of *de novo* root meristem formation in tomato. The position is fully funded for 3 years with extension possibility.

Applicants should have strong knowledge in basic plant development and genetics and excellent English writing and communication skills. Data analysis and bioinformatic experience is an advantage.

The lab is located at the Rehovot Campus of the Hebrew University, less than 30 minutes from Tel Aviv. More information about the university can be found here: http://new.huji.ac.il/en.

The position is available immediately. To apply, please send your CV and contacts of three references to idan.efroni@mail.huji.ac.il. The position will be open until it is filled.
