Postdoc Position on Plant Cell Biology

We are looking for a highly motivated postdoctoral scientist with a PhD in plant cell biology, synthetic biology, or related disciplines at the Department of Chemical and Environmental Engineering, University of California, Riverside. The postdoctoral scientist will work within the scope of an interdisciplinary project “Reprogramming Plant Perception for Novel Plant Natural Products Discovery”. The work will include plant receptor reconstitution and engineering, and/or plant genetic engineering, and/or secondary metabolite characterization. Candidates with research experience in plant cell signaling, plant secondary metabolism, or synthetic biology/genetic engineering are highly desirable.

The position is open immediately until filled. Please email your statement of research interest, curriculum vitae, and names/contact information of three references to yanranl@ucr.edu.
