3 Year Postdoc in Plant Development

A 3-year postdoctoral researcher position is available immediately under the CAS-JIC Centre of Excellence for Plant and Microbial Science (CEPAMS). The postdoctoral fellow will spend 18 months in the lab of Dr. Yuling Jiao at the Institute of Genetics and Developmental Biology in Beijing, China, and is expected to spend another 18 months in the lab of Dr. Robert Sablowski at the John Innes Centre in Norwich, UK. A motivated person with excellent molecular genetics skills is sought to investigate the role of transcription factor-encoding ATH1 gene functions in internode elongation and axillary meristem formation. The research will employ genetic, genomic, and imaging tools to reveal the modes of action for ATH1. Prior experience in molecular genetics and microscopy would be beneficial. Effective communication in English is essential. Salary will reflect qualifications and experience.

For further information, please contact Dr. Yuling Jiao (yljiao@genetics.ac.cn) and Prof. Robert Sablowski (robert.sablowski@jic.ac.uk). Interested applicants should send CV, a cover letter describing research interests and career goals, and the contact information for three references by e-mail to yljiao@genetics.ac.cn and robert.sablowski@jic.ac.uk.
