PhD studentship opportunities at the University of Edinburgh, UK

Institute of Molecular Plant Sciences at the University of Edinburgh invites applications for PhD studentships from candidates from around the world. We have several schemes of support especially for international applicants.

Edinburgh is the beautiful and historical capital of Scotland, a great city to lead a student life in. The student body is highly cosmopolitan, and the majority hail from overseas. To gain more insights into the life of international students at Edinburgh, please check out: http://www.worldclassedinburgh.co.uk/

Often regarded one of the top 20 universities in the world, the University hosts a wonderfully diverse and active biological enterprise, one of the largest, if not the largest, in the UK. Reflecting on this, you can find various lines of plant science research on-going at IMPS, spanning from evolutionary biology, ecophysiology to epigenetics and synthetic biology.

The list of the advertised PhD projects for the 2016-2017 start can be found at: http://www.ed.ac.uk/schools-departments/biology/postgraduate/pgr/phdproj?tags=4&cw_xml=projects_institute.php

For the first instance, please contact the potential supervisor with your CV and statement of interest, explaining why you are attracted to the project, and s/he will guide you to the most appropriate studentship programme for you. Self-funded students are also encouraged to contact potential supervisors similarly.

Deadlines for applications of most schemes are at the beginning of December, so please contact potential supervisors as soon as possible.

For entry requirement for your country and other related information, please go to: http://www.ed.ac.uk/studying/international/postgraduate-entry.
